The research programmes of your centre

Specie: Vegetable-Production Extension Research

Person of contact for this programme : Reto Neuweiler

Email: reto.neuweiler@agroscope.admin.ch

| Vegetal material | Technical itinerary | Integrated protection | Agrobiology | Other subjects |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------|
| All outdoor vegetable crops | Extension is a novel strategy for planning, controlling and implementing practical and solution-oriented agricultural research. Vegetable-production advisors and the vegetable producers organized in a so-called "Vegetable Research Forum" suggest project topics and prioritise them according to their importance. | Development of sustainable solutions and strategies for current problems with pests and diseases in the vegetable-production sector. | | Plant nutrition |

Specie: Sustainable control strategies against soil-borne pests and diseases

Person of contact for this programme: Matthias Lutz, Agroscope

Email: matthias.lutz@agroscope.admin.ch

| Vegetal material | Technical itinerary | Integrated protection | Agrobiology | Other subjects |
|-----------------------------|---------------------|----------------------------------------------------------------------------------------------------------|-------------|----------------|
| All outdoor vegetable crops | | Design and investigation of alternative methods and strategies to control soil-borne pests and diseases. | | |

Specie: Plant-protection gaps and minor uses

Person of contact for this programme: Reto Neuweiler

Email: reto.neuweiler@agroscope.admin.ch

| Vegetal material | Technical itinerary | Integrated protection | Agrobiology | Other subjects |
|---------------------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------|
| All vegetable crops | Project topics and plant-protection gaps are suggested and prioritised by representatives of the vegetable industry | Agroscope works out propositions how to fill plant-protection gaps in an administrative way if possible. In addition efficacy trials are conducted in order to examine the appropriateness of potentially usable chemical products under Swiss climatic and growing conditions. | | |

Current partnership with other research centres (national or international)

Specie: currently none

Nature of the project:

Length of the project:

Partner names and countries:

Are you searching for more European partnerships with other research centres?

On what species: sustainable plant protection, biological control of soil-borne pests and diseases

What kind of projects are you searching for: applied sciences

What kind of partners are you searching for? From which countries? Institutes and research centers conducting practical research all over Europe
